Westwood has spent almost $1 billion to buy the two at One Bryant Park and the one next door, which is called One Vanderbilt, which will become its new flagship. The site between 53rd and 57th Streets and Fifth Avenue and Central Park South is currently occupied by a post-modern concrete office building designed by Cesar Pelli, which is called One Vanderbilt. The complex also includes One World Trade Center, which was completed in the early 21st century as a replacement for the aging World Trade Center, and the nearby St. Regis Hotel, which is a LEED-certified luxury hotel. The purchase, which closed on Thursday, was made through a partnership called CKD of New York, which is the franchise business of Chicago-based Cintas, an office products company. Cintas, which recently became the first office products company to reach $20 billion in revenues, saw its first commercial real estate transaction when it bought a large warehouse complex in Atlanta in 2009. Westwood bought the two office towers from Canada's Brookfield Property Partners, which owns the property with Goldman Sachs Capital Partners and General Growth Properties. Westwood is currently building a 305-unit condo tower at 20 Pine, a second 305-unit tower at 18 Montague, and a 599-unit building at 900 West End Avenue, also in Manhattan.Q: How to access a 2D array in an arraylist? I have a nested arraylist of arrays. I am trying to access the "tomato" value in the bottom array. I'm sure I'm doing something very obvious wrong. ArrayList> a = new ArrayList>(); String[][] food_arry = {{"Tomato", "Tomato"}, {"Apple", "Apple"}}; ArrayList b = new ArrayList(); b.add(

seconds.Q: AsynchronousTask with one method and a callback I have created the AsynchronousTask class to make async requests with Task.Run. To simplify the classes I have tried to implement the callback pattern with the idea of returning Task. At some point of the callback there is a validation I need to implement so for that reason I need to implement a method. I would like to know if I'm doing something wrong and if I really can use a callback inside an async method. public class AsynchronousTask { private readonly Thread thread; private readonly

CancellationTokenSource cts; public AsynchronousTask(CancellationTokenSource cts = null) { this.cts = cts?? new CancellationTokenSource(); thread = new Thread(Run); thread.IsBackground = true; thread.Start(); } private async Task Run() { var model = await GetModelAsync(); if(ValidateModel(model)) return; else //Do something } private Task GetModelAsync() { var token = cts.Token; return Task.Run(async () => f678ea9f9e
